

Domain challenge and submission

Level 1: Understanding Domains & Challenges

How many domains and challenges are there?

Ten domains and one hundred challenges in total — ten challenges per domain. The domains are EdTech, HealthTech, E-Commerce, FinTech, AgriTech, ClimaTech, LogiTech, GovTech, LegalTech and WorkTech.

How do challenges relate to domains?

Each domain lists 4–6 flagship challenge areas. Each challenge describes what to build, the AI capabilities to demonstrate and the winning signal judges look for. Teams pick one challenge or propose their own idea within the domain.

How do we pick a domain and challenge?

Open the Domains & Challenges section on this page, browse the ten domains and their challenges, then select one challenge that your team will build a solution for. Each team picks exactly one challenge.

Do I have to pick one domain?

Yes. Each team picks exactly one domain and one challenge area within that domain. Teams may also propose their own idea within a domain — self-defined ideas are showcased if qualified and are evaluated under the same rubric.

Can we propose our own challenge?

Yes. Within your chosen domain, you may propose a self-defined idea. It is evaluated under the same rubric as named challenges and is judged on the same criteria.

Can we change our challenge after picking one?

Yes — until the Preliminary Submission deadline (12 August 2026, 23:59). After that the selected challenge is locked for judging consistency.

Level 2: Submission Basics & Timeline

What is the submission deadline?

The Preliminary Submission window is 30 June 2026 to 12 August 2026, 23:59 Bangladesh time. Shortlisted teams will then build and refine for the Final Program on 26 December 2026.

What must a submission include?

A submission has eight required sections: Basics, Problem statement, Solution, Demo & links, Data & AI provenance, Tooling and IDE disclosure, MCP usage disclosure, and Prompt library. A short YouTube demo link is required for the final round.

Can we edit our submission after submitting?

You can keep editing a Draft as many times as you want. [Once you click Submit, edits are locked.](#) Admins can unlock for a specific reason — request changes through event support.

Level 3: Tools, Links & Disclosure Rules

[Can we use AI tools, no-code platforms, or third-party APIs?](#)

[Yes. You must disclose them in the Tooling, MCP, and Prompt library sections. Honest disclosure does not hurt scoring — it is part of evaluating provenance and engineering quality.](#)

Do you accept private GitHub or Figma links?

Private links are accepted but will be flagged Restricted by our link validator. You must add a short Judge Access Note explaining how judges can review the project — for example, a read-only invite for the judges' email.

[Is a YouTube demo video mandatory?](#)

[Yes for the Final Program. The video must be public or unlisted and playable. Submissions without a passing YouTube link will be marked Incomplete and excluded from ranking.](#)

[Who can see our submission and prompt library?](#)

[Public fields \(project name, pitch, public summary, domain, challenge, YouTube demo\) are visible to everyone. Proprietary fields — full prompts, MCP details, tooling memory files — are visible only to your team, assigned judges, mentors \(if invited\) and admins.](#)

Level 4: Domain Deep-Dives (Sphere Descriptions)

What is HealthSphere AI about?

Transforming healthcare for billions — clinical decision support, diagnostics, medical imaging, hospital operations, mental health, elderly care, telemedicine and public-health intelligence.

What is FinSphere AI about?

Reimagines global financial services — banking automation, credit and risk, financial inclusion, wealth and insurance, fraud detection, RegTech and cross-border payments.

What is ClimateSphere AI about?

Targets climate action and sustainability — emissions monitoring, climate risk, energy optimisation, disaster prediction and green industry.

What is CivicSphere AI about?

Focuses on government, public services and digital nations — citizen services, digital identity, transparency, e-governance and public safety.

What is IndustrySphere AI about?

Covers manufacturing, supply chain and Industry 5.0 — predictive maintenance, smart factories, logistics optimisation and human-machine collaboration.

What is CommerceSphere AI about?

Focuses on commerce, retail, marketing and customer growth — personalisation, merchandising, conversational commerce, and creator economy tools.

What is InfraSphere AI about?

Covers AI infrastructure, cybersecurity and the future of work — AgentOps, knowledge grids, security copilots and human+AI productivity systems.
